EFV MRS Series

Manual Reset Adjustable Excess Flow Valve

Key Features

Controls excessive flows.

Features

- Field Adjustable
- Manual Reset
- Materials: 316SS
- Detects Excess Flows
- Function: Shuts Off Flow
- Output: Switch Contact (Optional)

Applications

- Plant Lines
- Regulator Failure
- Fitting Failure
- Toxic Gases & Liquids
- Gas Distribution Systems
- Gas Analyzers
- Loss Controls

Operation

Flow enters the unit and makes a right angle to the outlet port across the nose of a magnetic piston. The piston is held in place by attraction to an adjusting screw magnet. A pressure differential is created by flow across the piston. When the differential is great enough, the piston slides to a seat at the outlet port. The flow rate at which the piston actuates can be changed by turning the adjusting screw, thereby changing the piston's relationship with the flow stream. The piston makes a bubble tight seal when it comes in contact with the seat. To reopen the unit, turn the balancing valve handle on the side. This ports the upstream pipeline to the downstream pipeline. When the pressure is equalized on each side of the piston, it will reset. The unit is returned to normal operation by closing the balancing valve.

• Actuation points for air at 68° F and 14.7 PSIA.

Corrections must be used for other gases, line pressure and temperatures.* Please consult your representative or the factory.

Temperature Operating Range

AMBIENT: 0° to 125°F (-18° to 52° C)
MEDIA: 0° to 180°F (-18° to 82° C)

Calibration Range					
Model	Adjustable Range Air SLPM (SCFM)	Adjustable Range Water LPM (GPM)	PORT FNPT		
EFV-125	0.5 to 155.7 (0.018 to 5.5)	0.015 to 4.5 (0.004 to 1.2)	1/8"		
EFV-250	4 to 1132 (0.14 to 40)	0.100 to 15.1 (0.026 to 4.0)	1/4"		
EFV-375	85 to 1840 (3.0 to 65)	0.380 to 15.1 (0.100 to 4.0)	3/8"		
EFV-500 142 to 2123 (5.0 to 75)		1.90 to 37.8 (0.50 to 10.0)	1/2"		
EFV-750 425 to 3681 (15.0 to 130)		3.80 to 75.7 (1.0 to 20.0)	3/4"

Installation

We suggest the unit be calibrated in the attitude in which it will be installed. An actuation point approximately 3 or 4 times the normal Maximum flow rate at the lowest line pressure should be chosen to avoid the valve actuating from initial pressurization of the system and normal surges. If flow is kept constant, an actuation point 10% above the normal rate may be used.
